Achilles Utilities Coding Structure (AUCS)

Introduction

The Global utility code structure within Achilles Group was created in 2006. This was called Achilles Utilities Coding Structure (AUCS). This structure was developed with input from all the utility schemes within Achilles Group. The goal is that every utility scheme over time will transform to AUCS. This will ensure a standardized classification across regions and also potentially enable a global search function.

At the Sellihca steering committee meeting in September 2009 it was agreed that this transformation should take place early in 2010 and that the process would take a year to complete.

Structure:

The AUCS structure is similar to the Sellihca structure, but is generally more detailed. The code structure is as follows:

1. General Business Products
2. General Business Services & Works
3. Sector Specific Products
4. Sector Specific Services & Works

The main categories are the three first levels followed by pre-defined keywords. There are currently about 4000 codes in AUCS if keywords are included.

Registration products/services:

The registration of a product service is done in three steps:

1. Choosing a Sellihca-code

The Sellihca online questionnaire offers search features allowing you to make searches in the Sellihca-codes. By using the search features the process of locating a suitable code for your product/service is greatly simplified.

2. Select AUCS code

The Sellihca Online Questionnaire offers suggested mappings from Sellihca to AUCS. In addition to the suggested mappings from Sellihca the supplier can also choose freely from the AUCS code structure.

3. Describing the product/service

In addition to linking your products/services to a Sellihca-code, the system requires that you give a description of the product/services that you are registering. The products/services are to be described in an accurate manner in English, using ordinary well-known terms. An accurate description increases the chance of your records being looked up / examined by the utilities.

If no Sellihca or AUCS product/service-code is found appropriate for a product/service, you may want to use a "99-code"¹, bearing in mind, though, that the product/service description is particularly important for such products and services.

¹ The "99-groups" are the codes ending in 99, for instance 1.01.99. The "99-groups" begin with "Other...", and are aiming to comprise all products and services that do not naturally fall into any other and more specific code. Using the "99-groups" it is particularly important to provide an accurate description of the product/service.

The number in parenthesis () is the number of keywords
