Introduction

Sellihca - codes

## Sellihca Codes - English

# Sellihca-codes

## Introduction:

In connection with the establishment of Sellihca, Nordic Utility Pre-qualification System, a comprehensive product/service-codes was developed aiming to comprise all products/services procured by the utilities in the Nordic Region. Every product/service registered in Sellihca must be linked to a Sellihca product/service-code.

## Structure:

The Sellihca Product/service-code is divided into three main groups (1. Products, 2. Services, and 3. Works). Each main group contains sub-groups (for instance 1.01), which again are divided into codes (level three), for instance 1.01.01. By registration, all product/services must be linked to a code level three.

## Registration products/services:

The registration of a product service is done in three steps:

### 1. Choosing a Sellihca-code

The Sellihca electronic questionnaire offers search features allowing you to make searches in the Sellihca-codes. By using the search features the process of locating a suitable code for your product/service is greatly simplified.

### 2. Describing the product/service

In addition to subordinating your products/services to a Sellihca-code, the system requires that you give a description of the product/services that you are registering. The products/services are to be described in an accurate manner in **English**, using ordinary well-known terms. An accurate description increases the chance of your records being looked up/examined by the transport utilities.

Stated below are typical examples of product/service descriptions and categorisation:

#### Predefined Sellihca-code:

1.26.06 Fire Fighting Equipment / Products

Predefined Key Word:

Fire Extinguishers

#### Predefined Sellihca-code:

2.20.01 Surface Protection and Treatment

Supplier's Description:

Sandblasting, Painting and Coating of steel structures like bridges

If no Sellihca product/service-code is found appropriate for a product/service, you may want to use a "99-code"<sup>1</sup>, bearing in mind, though, that the product/service description is particularly important for such products and services.

---

<sup>1</sup> The "99-groups" are the codes ending in 99, for instance 1.01.99. The "99-groups" begin with "Other...", and are aiming to comprise all products and services that do not naturally fall into any other and more specific code. Using the "99-groups" it is particularly important to provide an accurate description of the product/service.
